## 4.a. Rationale

The rationale for this study is to provide a comprehensive overview of the current state of the CDHS 2016 data. The study aims to identify the key findings and implications of the data for policy and practice. The study is organized into four main sections: 1. Introduction, 2. Methodology, 3. Results, and 4. Conclusion. The Introduction section provides a brief overview of the study and its objectives. The Methodology section describes the data sources and the methods used for data analysis. The Results section presents the findings of the study, and the Conclusion section summarizes the key findings and implications. The study is organized into four main sections: 1. Introduction, 2. Methodology, 3. Results, and 4. Conclusion. The Introduction section provides a brief overview of the study and its objectives. The Methodology section describes the data sources and the methods used for data analysis. The Results section presents the findings of the study, and the Conclusion section summarizes the key findings and implications.

## 4.b. Comment and limitations

The study has several limitations that should be taken into account when interpreting the results. First, the data is based on a cross-sectional design, which limits the ability to establish causal relationships. Second, the data is self-reported, which may be subject to recall bias. Third, the data is limited to the CDHS 2016 survey, which may not be representative of the population in other years. Finally, the study is limited by the scope of the data, which does not cover all aspects of the population's health and well-being.

## 4.c. Method of computation

The data was computed using a series of steps. First, the raw data was cleaned and prepared for analysis. This involved removing any missing or invalid data and ensuring that the data was in the correct format. Next, the data was analyzed using a series of statistical tests to identify trends and patterns. Finally, the results were presented in a series of tables and figures that were easy to interpret.

## 5. Data availability and disaggregation

The CDHS 2016 data is available in a series of tables and figures that can be downloaded from the CDHS website. The data is disaggregated by sex, age, and education level, allowing for a detailed analysis of the population's health and well-being. The data is also available in a series of tables and figures that can be downloaded from the CDHS website.
