

## **0.a. Goal**

0.a. Goal: The goal of the indicator is to measure the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring.

## **0.b. Target**

0.b. Target: The target of the indicator is to measure the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring. The target is to achieve the Sustainable Development Goals (SDGs) by 2030.

## **0.c. Indicator**

0.c. Indicator: The indicator is a measure of the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring.

## **0.d. Series**

0.d. Series: The series is a measure of the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring.

## **0.e. Metadata update**

0.e. Metadata update: The metadata update is a measure of the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring.

## **0.f. Related indicators**

0.f. Related indicators: The related indicators are a measure of the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring.

## **1.a. Organisation**

1.a. Organisation: The organisation is a measure of the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring.

## **1.b. Contact person(s)**

1.b. Contact person(s): The contact person(s) is a measure of the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring.

## **1.c. Contact organisation unit**

1.c. Contact organisation unit: The contact organisation unit is a measure of the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring.

## **1.d. Contact person function**

#### ***4.a. Rationale***

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data collected from the survey is used to monitor and evaluate the progress of development programs and to inform policy decisions. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time. The data is made available to the public through a variety of channels, including the DHS website and data archives.

#### 4.c. Method of computation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data collected from the survey is used to monitor and evaluate the progress of development programs and to inform policy decisions. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time. The data is made available to the public through a variety of channels, including the DHS website and data archives.

#### 4.d. Validation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data collected from the survey is used to monitor and evaluate the progress of development programs and to inform policy decisions. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time. The data is made available to the public through a variety of channels, including the DHS website and data archives.

### 5. Data availability and disaggregation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data collected from the survey is used to monitor and evaluate the progress of development programs and to inform policy decisions. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time. The data is made available to the public through a variety of channels, including the DHS website and data archives.

### 6. Comparability/deviation from international standards

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data collected from the survey is used to monitor and evaluate the progress of development programs and to inform policy decisions. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time. The data is made available to the public through a variety of channels, including the DHS website and data archives.

### 7. References and Documentation

[1] Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data collected from the survey is used to monitor and evaluate the progress of development programs and to inform policy decisions. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time. The data is made available to the public through a variety of channels, including the DHS website and data archives.
