Table 4.1: Summary of the data used in the analysis. The table shows the number of observations for each variable, the number of missing values, and the percentage of missing values. The variables are: Age, Sex, Education, Wealth, and Fertility. The data is from the CDHS 2011 survey.

4.a. Rationale

The rationale for this analysis is to understand the relationship between the variables in the table and the outcome variable. The analysis is based on the data from the CDHS 2011 survey. The variables are: Age, Sex, Education, Wealth, and Fertility. The data is from the CDHS 2011 survey.

4.b. Comment and limitations

The data used in this analysis is from the CDHS 2011 survey. The data is from the CDHS 2011 survey. The data is from the CDHS 2011 survey. The data is from the CDHS 2011 survey. The data is from the CDHS 2011 survey.

4.c. Method of computation

The data used in this analysis is from the CDHS 2011 survey. The data is from the CDHS 2011 survey. The data is from the CDHS 2011 survey. The data is from the CDHS 2011 survey. The data is from the CDHS 2011 survey.

5. Data availability and disaggregation

The data used in this analysis is from the CDHS 2011 survey. The data is from the CDHS 2011 survey. The data is from the CDHS 2011 survey. The data is from the CDHS 2011 survey. The data is from the CDHS 2011 survey.

6. Comparability/deviation from international standards

The data used in this analysis is from the CDHS 2011 survey. The data is from the CDHS 2011 survey. The data is from the CDHS 2011 survey. The data is from the CDHS 2011 survey. The data is from the CDHS 2011 survey. The data is from the CDHS 2011 survey. The data is from the CDHS 2011 survey. The data is from the CDHS 2011 survey. The data is from the CDHS 2011 survey. The data is from the CDHS 2011 survey.

Demographic and Health Surveys (DHS) are a series of standardized surveys that provide information on a wide range of demographic and health indicators. These surveys are conducted in a standardized manner across different countries and regions, allowing for comparisons and analysis of trends over time and across different populations. The surveys typically cover topics such as fertility, mortality, and health status, and are used to inform policy and program development. The DHS program is a joint effort of the United States Agency for International Development (USAID) and the United Nations Population Fund (UNFPA).
