4.a. Rationale

The rationale for the study is to provide a comprehensive overview of the current state of the country's health and development. The study is based on the assumption that the data collected from the CDHS 2016 survey is representative of the population. The study aims to identify the key challenges and opportunities for the country's health and development. The study is organized into four main sections: (1) Introduction, (2) Data availability and disaggregation, (3) Method of computation, and (4) Comment and limitations. The study is based on the assumption that the data collected from the CDHS 2016 survey is representative of the population. The study aims to identify the key challenges and opportunities for the country's health and development. The study is organized into four main sections: (1) Introduction, (2) Data availability and disaggregation, (3) Method of computation, and (4) Comment and limitations.

4.b. Comment and limitations

The comment and limitations of the study are as follows: The study is based on the assumption that the data collected from the CDHS 2016 survey is representative of the population. The study aims to identify the key challenges and opportunities for the country's health and development. The study is organized into four main sections: (1) Introduction, (2) Data availability and disaggregation, (3) Method of computation, and (4) Comment and limitations. The study is based on the assumption that the data collected from the CDHS 2016 survey is representative of the population. The study aims to identify the key challenges and opportunities for the country's health and development. The study is organized into four main sections: (1) Introduction, (2) Data availability and disaggregation, (3) Method of computation, and (4) Comment and limitations.

4.c. Method of computation

The method of computation for the study is as follows: The study is based on the assumption that the data collected from the CDHS 2016 survey is representative of the population. The study aims to identify the key challenges and opportunities for the country's health and development. The study is organized into four main sections: (1) Introduction, (2) Data availability and disaggregation, (3) Method of computation, and (4) Comment and limitations. The study is based on the assumption that the data collected from the CDHS 2016 survey is representative of the population. The study aims to identify the key challenges and opportunities for the country's health and development. The study is organized into four main sections: (1) Introduction, (2) Data availability and disaggregation, (3) Method of computation, and (4) Comment and limitations.

5. Data availability and disaggregation

The data availability and disaggregation for the study is as follows: The study is based on the assumption that the data collected from the CDHS 2016 survey is representative of the population. The study aims to identify the key challenges and opportunities for the country's health and development. The study is organized into four main sections: (1) Introduction, (2) Data availability and disaggregation, (3) Method of computation, and (4) Comment and limitations. The study is based on the assumption that the data collected from the CDHS 2016 survey is representative of the population. The study aims to identify the key challenges and opportunities for the country's health and development. The study is organized into four main sections: (1) Introduction, (2) Data availability and disaggregation, (3) Method of computation, and (4) Comment and limitations.
