2.a. Definition and concepts

CDHS 2016 Data Report (MMR) is a report that provides information on the health and well-being of children and women in Cambodia. The report is based on data from the Cambodia Demographic and Health Survey (CDHS) 2016, which is a national survey that collects data on a wide range of topics, including reproductive health, child health, and household characteristics. The MMR report is a key product of the CDHS 2016, and it provides valuable information for policymakers and researchers alike. The report is organized into several sections, including an executive summary, a list of abbreviations, and a list of figures. The main body of the report is divided into two main parts: the first part provides an overview of the survey and its findings, and the second part provides more detailed information on specific topics. The report is written in English and is available in both print and electronic formats. It is a valuable resource for anyone interested in the health and well-being of children and women in Cambodia.

3.b. Data collection method

CDHS 2016 Data Report is a report that provides information on the health and well-being of children and women in Cambodia. The report is based on data from the Cambodia Demographic and Health Survey (CDHS) 2016, which is a national survey that collects data on a wide range of topics, including reproductive health, child health, and household characteristics. The CDHS 2016 is a multi-stage, probability-based survey that uses a combination of face-to-face interviews and self-administered questionnaires to collect data. The survey is conducted by the National Institute of Demography and Statistics (NIDS) in Cambodia, and it is supported by the United Nations Population Fund (UNFPA). The CDHS 2016 is a valuable resource for policymakers and researchers alike, as it provides detailed information on the health and well-being of children and women in Cambodia. The report is organized into several sections, including an executive summary, a list of abbreviations, and a list of figures. The main body of the report is divided into two main parts: the first part provides an overview of the survey and its findings, and the second part provides more detailed information on specific topics. 4.b. Comment and limitations

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and is used to estimate the prevalence of various health conditions and to monitor trends over time. The survey is conducted in a household and is used to estimate the prevalence of various health conditions and to monitor trends over time. The survey is conducted in a household and is used to estimate the prevalence of various health conditions and to monitor trends over time.

5. Data availability and disaggregation

Demographic and Health Survey (DHS) data are available for a wide range of countries and regions. The data are available in a disaggregated format, allowing for analysis by age, sex, and other demographic factors. The data are available in a disaggregated format, allowing for analysis by age, sex, and other demographic factors. The data are available in a disaggregated format, allowing for analysis by age, sex, and other demographic factors.
