3.b. Data collection method

MoLVT (Molecular Lattice Vibration Theory) is a computational method used to calculate the vibrational frequencies of molecules. It involves solving the eigenvalue problem for the Hessian matrix, which represents the second derivatives of the potential energy function with respect to the atomic coordinates.

3.g. Institutional mandate

The institutional mandate of the TVET system is defined by the legal framework, which includes the TVET Law, the TVET Strategy, and the TVET Action Plan. The TVET system is responsible for the development, implementation, and evaluation of TVET programs and standards. The TVET system is also responsible for the coordination and collaboration with other stakeholders, including the government, the private sector, and the civil society. The TVET system is also responsible for the monitoring and evaluation of the TVET system's performance and impact.

4.a. Rationale

The rationale for the TVET system is based on the need to develop a skilled workforce that is capable of meeting the demands of the labor market. The TVET system is designed to provide a comprehensive and integrated approach to TVET, covering all levels of education and training. The TVET system is also designed to be flexible and responsive to the changing needs of the labor market.

4.c. Method of computation

The TVET system is based on the TVET Law, which defines the TVET system's structure, functions, and responsibilities. The TVET system is also based on the TVET Strategy, which outlines the TVET system's vision, mission, and goals. The TVET system is also based on the TVET Action Plan, which details the TVET system's implementation and monitoring and evaluation framework.

4.d. Validation

The TVET system is validated through a series of steps, including the identification of the TVET system's components, the assessment of the TVET system's performance, and the evaluation of the TVET system's impact. The TVET system is also validated through the participation of stakeholders, including the government, the private sector, and the civil society.

4.i. Quality management

The TVET system is managed through a series of steps, including the identification of the TVET system's components, the assessment of the TVET system's performance, and the evaluation of the TVET system's impact. The TVET system is also managed through the participation of stakeholders, including the government, the private sector, and the civil society.

4.j. Quality assurance

The TVET system is assured through a series of steps, including the identification of the TVET system's components, the assessment of the TVET system's performance, and the evaluation of the TVET system's impact. The TVET system is also assured through the participation of stakeholders, including the government, the private sector, and the civil society.

4.k. Quality assessment

The TVET system is assessed through a series of steps, including the identification of the TVET system's components, the assessment of the TVET system's performance, and the evaluation of the TVET system's impact. The TVET system is also assessed through the participation of stakeholders, including the government, the private sector, and the civil society.
