4.b. Comment and limitations

[illegible]

The data sources used in this study are the National Income and Product Accounts (NIPA) and the National Health Accounts (NHA). The NIPA data are obtained from the Bureau of Economic Analysis (BEA) and the NHA data are obtained from the Centers for Disease Control and Prevention (CDC). The data are processed using the following steps: (1) Data cleaning and (2) Data aggregation.

4.c. Method of computation

The data are processed using the following steps: (1) Data cleaning and (2) Data aggregation. The data are then used to calculate the following variables: (1) The total health expenditure (TNE) and (2) The total health expenditure per capita (TNE/CAP).

4.d. Validation

The data are validated using the following steps: (1) Data cleaning and (2) Data aggregation. The data are then used to calculate the following variables: (1) The total health expenditure (TNE) and (2) The total health expenditure per capita (TNE/CAP).

4.i. Quality management

NIS data are obtained from the National Income and Product Accounts (NIPA) and the National Health Accounts (NHA). The data are processed using the following steps: (1) Data cleaning and (2) Data aggregation. The data are then used to calculate the following variables: (1) The total health expenditure (TNE) and (2) The total health expenditure per capita (TNE/CAP).

5. Data availability and disaggregation

The data are available from the National Income and Product Accounts (NIPA) and the National Health Accounts (NHA). The data are processed using the following steps: (1) Data cleaning and (2) Data aggregation. The data are then used to calculate the following variables: (1) The total health expenditure (TNE) and (2) The total health expenditure per capita (TNE/CAP).

6. Comparability/deviation from international standards

The data are compared to the following international standards: (1) The National Income and Product Accounts (NIPA) and (2) The National Health Accounts (NHA). The data are processed using the following steps: (1) Data cleaning and (2) Data aggregation. The data are then used to calculate the following variables: (1) The total health expenditure (TNE) and (2) The total health expenditure per capita (TNE/CAP).
