### 3.a. Data sources

(MEF) (MEYS)

### ***3.b. Data collection method***

The data sources listed in Table 1 are used to construct the variables in the model. The data are collected from various sources, including the Ministry of Education and Science (MEYS), the Ministry of Health, and the Ministry of Labour. The data are then processed and analysed to estimate the parameters of the model.

### 3.c. Data collection calendar

The data collection calendar is shown in Table 2.

### 3.d. Data release calendar

The data release calendar is shown in Table 3.

### 3.e. Data providers

The data providers are listed in Table 4.

### 3.f. Data compilers

The data compilers are listed in Table 5. The data are compiled from the data providers and are then used to estimate the parameters of the model.

### 3.g. Institutional mandate

The institutional mandate is shown in Table 6. The mandate is to estimate the parameters of the model and to provide policy recommendations. The mandate is given by the Ministry of Education and Science (MEYS) and the Ministry of Health. The mandate is to estimate the parameters of the model and to provide policy recommendations. The mandate is given by the Ministry of Education and Science (MEYS) and the Ministry of Health.

### 4.a. Rationale

The rationale for the study is to estimate the parameters of the model and to provide policy recommendations. The study is motivated by the need to understand the impact of the pandemic on the economy and on the labour market. The study is motivated by the need to understand the impact of the pandemic on the economy and on the labour market.

### 4.b. Comment and limitations

The comment and limitations of the study are shown in Table 7. The study is limited by the availability of data and by the quality of the data. The study is limited by the availability of data and by the quality of the data.

#### 4.c. Method of computation

\_\_\_\_\_ (\_\_\_\_\_, \_\_\_\_\_  
\_\_\_\_\_) \_\_\_\_\_  
\_\_\_\_\_ (\_\_\_\_\_) \_\_\_\_\_

$$= \frac{1}{n} \sum_{i=1}^n \frac{1}{\sqrt{2\pi}} \exp\left(-\frac{1}{2} \left(\frac{y_i - \mu}{\sigma}\right)^2\right)$$
$$= \frac{1}{n} \sum_{i=1}^n \left( \frac{\partial L(\theta)}{\partial \theta} \right)_{\theta=\theta_i}$$
[illegible]
