2.a. Definition and concepts

Definition and concepts are the foundation of any research. They provide a clear and concise description of the variables and constructs being studied. This section should define the key terms and concepts used in the study, and explain how they are related to each other. It should also discuss the theoretical framework that guides the research, and how the concepts are operationalized. The definitions should be clear, unambiguous, and based on established literature. The concepts should be well-defined and measurable. The theoretical framework should be clearly stated and justified. The operationalization should be clearly described and valid.

Percentage (%)

3.a. Data sources

Primary data sources (CSES) []

3.b. Data collection method

Data collection methods are the procedures used to gather data for a study. This section should describe the methods used in the study, and explain how they are related to the research objectives. It should discuss the sampling method, the data collection instrument, and the data collection procedure. The sampling method should be clearly stated and justified. The data collection instrument should be clearly described and valid. The data collection procedure should be clearly described and valid. The methods should be appropriate for the research objectives and the variables being studied. The methods should be reliable and valid. The methods should be clearly stated and justified. The methods should be clearly described and valid. The methods should be clearly described and valid.
