Demographic and Health Surveys (DHS) are a series of standardized surveys that provide information on a wide range of demographic and health indicators. These surveys are conducted in a standardized manner across different countries and regions, allowing for comparisons and analysis of trends over time and across different populations. The surveys typically cover topics such as fertility, mortality, and health status, and are used to inform policy and program development. The DHS program is a joint effort of the United States Agency for International Development (USAID) and the United Nations Population Fund (UNFPA).
