4.a. Rationale

The rationale for the study is to provide a comprehensive overview of the current state of the country's health and development. The study is based on the 2016 CDHS survey, which is a nationally representative survey of the population aged 15 and above. The survey covers a wide range of topics, including reproductive health, maternal and child health, and household characteristics. The data from the survey is used to generate estimates of various health and development indicators, which are then presented in the form of tables and charts. The study aims to provide a clear and concise summary of the findings, which can be used by policymakers and other stakeholders to inform their decision-making. The study is organized into four main sections: 4.a. Rationale, 4.b. Comment and limitations, 4.c. Method of computation, and 5. Data availability and disaggregation. Each section provides a detailed explanation of the study's objectives, methods, and findings.

4.b. Comment and limitations

The study is based on the 2016 CDHS survey, which is a nationally representative survey of the population aged 15 and above. The survey covers a wide range of topics, including reproductive health, maternal and child health, and household characteristics. The data from the survey is used to generate estimates of various health and development indicators, which are then presented in the form of tables and charts. The study aims to provide a clear and concise summary of the findings, which can be used by policymakers and other stakeholders to inform their decision-making. The study is organized into four main sections: 4.a. Rationale, 4.b. Comment and limitations, 4.c. Method of computation, and 5. Data availability and disaggregation. Each section provides a detailed explanation of the study's objectives, methods, and findings.

4.c. Method of computation

The method of computation used in the study is based on the 2016 CDHS survey data. The data is processed using a series of steps, including data cleaning, data weighting, and data analysis. The results of the analysis are then presented in the form of tables and charts. The study aims to provide a clear and concise summary of the findings, which can be used by policymakers and other stakeholders to inform their decision-making. The study is organized into four main sections: 4.a. Rationale, 4.b. Comment and limitations, 4.c. Method of computation, and 5. Data availability and disaggregation. Each section provides a detailed explanation of the study's objectives, methods, and findings.

5. Data availability and disaggregation

The data from the 2016 CDHS survey is available in a public domain. The data is organized into a series of tables, which are available in both English and Amharic. The data is disaggregated by sex, age, and region. The study aims to provide a clear and concise summary of the findings, which can be used by policymakers and other stakeholders to inform their decision-making. The study is organized into four main sections: 4.a. Rationale, 4.b. Comment and limitations, 4.c. Method of computation, and 5. Data availability and disaggregation. Each section provides a detailed explanation of the study's objectives, methods, and findings.
