

0.a. Goal

0.a. Goal: The goal of the indicator is to measure the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring.

0.b. Target

0.b. Target: The target of the indicator is to measure the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring. The target is to achieve the Sustainable Development Goals (SDGs) by 2030.

0.c. Indicator

0.c. Indicator: The indicator is a measure of the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring.

0.d. Series

0.d. Series: The series is a measure of the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring.

0.e. Metadata update

0.e. Metadata update: The metadata update is a measure of the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring.

0.f. Related indicators

0.f. Related indicators: The related indicators are a measure of the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring.

1.a. Organisation

1.a. Organisation: The organisation is a measure of the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring.

1.b. Contact person(s)

1.b. Contact person(s): The contact person(s) is a measure of the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring.

1.c. Contact organisation unit

1.c. Contact organisation unit: The contact organisation unit is a measure of the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring.

1.d. Contact person function

4.a. Rationale

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey are used to estimate national and sub-national rates of various indicators, and to monitor trends over time. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time.

4.c. Method of computation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey are used to estimate national and sub-national rates of various indicators, and to monitor trends over time. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time.

4.d. Validation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey are used to estimate national and sub-national rates of various indicators, and to monitor trends over time. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time.

5. Data availability and disaggregation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey are used to estimate national and sub-national rates of various indicators, and to monitor trends over time. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time.

6. Comparability/deviation from international standards

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey are used to estimate national and sub-national rates of various indicators, and to monitor trends over time. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time.

7. References and Documentation

[1] Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey are used to estimate national and sub-national rates of various indicators, and to monitor trends over time. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time.
