4.a. Rationale

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey are used to monitor and evaluate the progress of development programs and to inform policy decisions. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time. The data are made available to the public through a variety of channels, including the DHS website and data archives.

4.c. Method of computation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey are used to monitor and evaluate the progress of development programs and to inform policy decisions. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time. The data are made available to the public through a variety of channels, including the DHS website and data archives.

4.d. Validation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey are used to monitor and evaluate the progress of development programs and to inform policy decisions. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time. The data are made available to the public through a variety of channels, including the DHS website and data archives.

5. Data availability and disaggregation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey are used to monitor and evaluate the progress of development programs and to inform policy decisions. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time. The data are made available to the public through a variety of channels, including the DHS website and data archives.

6. Comparability/deviation from international standards

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey are used to monitor and evaluate the progress of development programs and to inform policy decisions. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time. The data are made available to the public through a variety of channels, including the DHS website and data archives.

7. References and Documentation

[1] Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey are used to monitor and evaluate the progress of development programs and to inform policy decisions. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time. The data are made available to the public through a variety of channels, including the DHS website and data archives.
