Demographic and Health Surveys (DHS) are a series of standardized surveys that provide information on a wide range of demographic and health indicators. These surveys are conducted in many developing countries and are used to monitor progress towards the Millennium Development Goals (MDGs). The DHS surveys are conducted by the Demographic and Health Surveys Program, which is a joint effort of the United States Agency for International Development (USAID) and the Demographic and Health Surveys Program of the United Nations Population Fund (UNFPA). The DHS surveys are conducted in a standardized manner, which allows for comparison of results across countries and over time. The DHS surveys are used to monitor progress towards the MDGs, and to provide information on a wide range of demographic and health indicators. The DHS surveys are conducted in a standardized manner, which allows for comparison of results across countries and over time. The DHS surveys are used to monitor progress towards the MDGs, and to provide information on a wide range of demographic and health indicators.
