

0.a. Goal

0.a. Goal: To ensure that the data for the indicator is accurate, reliable, and up-to-date.

0.b. Target

0.b. Target: To ensure that the data for the indicator is accurate, reliable, and up-to-date, and that the data is used to inform policy and practice.

0.c. Indicator

0.c. Indicator: The indicator is defined as the number of people who are employed in the informal sector.

0.d. Series

0.d. Series: The series is defined as the number of people who are employed in the informal sector, by gender and age.

0.e. Metadata update

0.e. Metadata update: The metadata is updated annually.

0.f. Related indicators

0.f. Related indicators: The indicator is related to the indicator on the number of people who are employed in the formal sector, and the indicator on the number of people who are employed in the informal sector.

1.a. Organisation

1.a. Organisation: The indicator is managed by the National Statistical Institute (NSI).

1.b. Contact person(s)

1.b. Contact person(s): The contact person is the Head of the NSI.

1.c. Contact organisation unit

1.c. Contact organisation unit: The contact organisation unit is the NSI, and the contact person is the Head of the NSI.

1.d. Contact person function

4.a. Rationale

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data collected from the survey is used to monitor and evaluate the progress of development programs and to inform policy decisions. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time.

4.c. Method of computation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data collected from the survey is used to monitor and evaluate the progress of development programs and to inform policy decisions. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time.

4.d. Validation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data collected from the survey is used to monitor and evaluate the progress of development programs and to inform policy decisions. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time.

5. Data availability and disaggregation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data collected from the survey is used to monitor and evaluate the progress of development programs and to inform policy decisions. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time.

6. Comparability/deviation from international standards

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data collected from the survey is used to monitor and evaluate the progress of development programs and to inform policy decisions. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time.

7. References and Documentation

[1] Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data collected from the survey is used to monitor and evaluate the progress of development programs and to inform policy decisions. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time.
