

0.a. Goal

The goal of the ISCO is to provide a common framework for the classification of occupations across different countries and regions, facilitating the comparison of occupational data and the analysis of labour market trends.

0.b. Target

The target of the ISCO is to provide a common framework for the classification of occupations across different countries and regions, facilitating the comparison of occupational data and the analysis of labour market trends. The target is to provide a common framework for the classification of occupations across different countries and regions, facilitating the comparison of occupational data and the analysis of labour market trends.

0.c. Indicator

0.c.1 The ISCO is a common framework for the classification of occupations across different countries and regions (ISCO)

0.d. Series

0.d.1 The ISCO is a common framework for the classification of occupations across different countries and regions (ISCO) (ISCO)

0.e. Metadata update

0.e.1 The ISCO is a common framework for the classification of occupations across different countries and regions (ISCO)

0.f. Related indicators

0.f.1 The ISCO is a common framework for the classification of occupations across different countries and regions; 0.f.2 The ISCO is a common framework for the classification of occupations across different countries and regions; 0.f.3 The ISCO is a common framework for the classification of occupations across different countries and regions (ISCO)

1.a. Organisation

1.a.1 The ISCO is a common framework for the classification of occupations across different countries and regions (NIS) (ISCO)

1.b. Contact person(s)

1.b.1 The ISCO is a common framework for the classification of occupations across different countries and regions (ISCO)

1.c. Contact organisation unit

1.c.1 The ISCO is a common framework for the classification of occupations across different countries and regions, 1.c.2 The ISCO is a common framework for the classification of occupations across different countries and regions, 1.c.3 The ISCO is a common framework for the classification of occupations across different countries and regions

4.a. Rationale

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on population, fertility, mortality, and health. The data are used to monitor and evaluate the progress of development and to inform policy and program decisions.

4.c. Method of computation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on population, fertility, mortality, and health. The data are used to monitor and evaluate the progress of development and to inform policy and program decisions.

4.d. Validation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on population, fertility, mortality, and health. The data are used to monitor and evaluate the progress of development and to inform policy and program decisions.

5. Data availability and disaggregation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on population, fertility, mortality, and health. The data are used to monitor and evaluate the progress of development and to inform policy and program decisions.

6. Comparability/deviation from international standards

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on population, fertility, mortality, and health. The data are used to monitor and evaluate the progress of development and to inform policy and program decisions.

7. References and Documentation

[1] Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on population, fertility, mortality, and health. The data are used to monitor and evaluate the progress of development and to inform policy and program decisions.
