

## **0.a. Goal**

The goal of the ISCO is to provide a common framework for the classification of occupations across different countries and regions, facilitating the comparison of occupational data and the analysis of labour market trends.

## **0.b. Target**

The target of the ISCO is to provide a common framework for the classification of occupations across different countries and regions, facilitating the comparison of occupational data and the analysis of labour market trends. The target is to provide a common framework for the classification of occupations across different countries and regions, facilitating the comparison of occupational data and the analysis of labour market trends.

## **0.c. Indicator**

0.c.1 The indicator is the number of occupations classified in the ISCO (ISCO)

## **0.d. Series**

0.d.1 The series is the number of occupations classified in the ISCO (ISCO) (ISCO)

## **0.e. Metadata update**

The metadata update is the number of occupations classified in the ISCO (ISCO)

## **0.f. Related indicators**

The related indicators are the number of occupations classified in the ISCO (ISCO); the number of occupations classified in the ISCO (ISCO); the number of occupations classified in the ISCO (ISCO)

## **1.a. Organisation**

The organisation is the number of occupations classified in the ISCO (NIS) (NIS) (NIS)

## **1.b. Contact person(s)**

The contact person(s) is the number of occupations classified in the ISCO (ISCO) (ISCO)

## **1.c. Contact organisation unit**

The contact organisation unit is the number of occupations classified in the ISCO, the number of occupations classified in the ISCO, the number of occupations classified in the ISCO

## **1.d. Contact person function**

#### ***4.a. Rationale***

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on fertility, mortality, and other health-related issues. The data is used to monitor and evaluate the progress of development and health programs.

### 4.c. Method of computation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on fertility, mortality, and other health-related issues. The data is used to monitor and evaluate the progress of development and health programs.

### 4.d. Validation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on fertility, mortality, and other health-related issues. The data is used to monitor and evaluate the progress of development and health programs.

## 5. Data availability and disaggregation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on fertility, mortality, and other health-related issues. The data is used to monitor and evaluate the progress of development and health programs.

## 6. Comparability/deviation from international standards

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on fertility, mortality, and other health-related issues. The data is used to monitor and evaluate the progress of development and health programs.

## 7. References and Documentation

[1] Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on fertility, mortality, and other health-related issues. The data is used to monitor and evaluate the progress of development and health programs.
