

0.a. Goal

The goal of the ISCO is to provide a common framework for the classification of occupations across different countries and regions, facilitating the comparison of occupational data and the analysis of labour market trends.

0.b. Target

The target of the ISCO is to provide a common framework for the classification of occupations across different countries and regions, facilitating the comparison of occupational data and the analysis of labour market trends. The target is to provide a common framework for the classification of occupations across different countries and regions, facilitating the comparison of occupational data and the analysis of labour market trends.

0.c. Indicator

0.c.1 The indicator is the number of occupations classified in the ISCO (ISCO)

0.d. Series

0.d.1 The series is the number of occupations classified in the ISCO (ISCO) (ISCO)

0.e. Metadata update

The metadata update is the number of occupations classified in the ISCO (ISCO)

0.f. Related indicators

The related indicators are the number of occupations classified in the ISCO (ISCO); the number of occupations classified in the ISCO (ISCO); the number of occupations classified in the ISCO (ISCO)

1.a. Organisation

The organisation is the number of occupations classified in the ISCO (NIS) (NIS) (NIS)

1.b. Contact person(s)

The contact person(s) is the number of occupations classified in the ISCO (ISCO) (ISCO)

1.c. Contact organisation unit

The contact organisation unit is the number of occupations classified in the ISCO, the number of occupations classified in the ISCO, the number of occupations classified in the ISCO

4.a. Rationale

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on fertility, mortality, and other health-related issues. The data is used to monitor and evaluate the progress of development programs and to inform policy-making.

4.c. Method of computation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on fertility, mortality, and other health-related issues. The data is used to monitor and evaluate the progress of development programs and to inform policy-making.

4.d. Validation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on fertility, mortality, and other health-related issues. The data is used to monitor and evaluate the progress of development programs and to inform policy-making.

5. Data availability and disaggregation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on fertility, mortality, and other health-related issues. The data is used to monitor and evaluate the progress of development programs and to inform policy-making.

6. Comparability/deviation from international standards

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on fertility, mortality, and other health-related issues. The data is used to monitor and evaluate the progress of development programs and to inform policy-making.

7. References and Documentation

[1] Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on fertility, mortality, and other health-related issues. The data is used to monitor and evaluate the progress of development programs and to inform policy-making.
