### 3.g. Institutional mandate

The institutional mandate of the TVET system is defined by the legal framework, which includes the roles and responsibilities of the various stakeholders involved in the system. This includes the government, the private sector, and the educational institutions. The institutional mandate is also defined by the policies and procedures that govern the system, such as the funding mechanisms, the quality assurance mechanisms, and the governance structures. The institutional mandate is also defined by the cultural and social norms that shape the system, such as the attitudes towards vocational education and training, and the values that underpin the system.

### 4.a. Rationale

The rationale for the TVET system is based on the need to provide quality vocational education and training to the young people of the country. This is necessary to ensure that they have the skills and knowledge needed to enter the labour market and to contribute to the country's economic development. The rationale is also based on the need to address the skills gap in the country, which is a major constraint to economic growth.

### 4.c. Method of computation

The method of computation for the TVET system is based on the use of a set of indicators that are used to measure the performance of the system. These indicators are used to calculate the TVET system's performance index, which is a composite index that reflects the system's overall performance. The indicators are used to measure the system's performance in terms of its inputs, its processes, and its outputs.

### 4.d. Validation

The validation of the TVET system is based on the use of a set of criteria that are used to assess the system's performance. These criteria are used to assess the system's performance in terms of its inputs, its processes, and its outputs. The validation is also based on the use of a set of indicators that are used to measure the system's performance. These indicators are used to calculate the TVET system's performance index, which is a composite index that reflects the system's overall performance.

### 4.i. Quality management

The quality management of the TVET system is based on the use of a set of standards that are used to ensure the quality of the system's outputs. These standards are used to ensure that the system's outputs are of high quality and that they meet the needs of the stakeholders. The quality management is also based on the use of a set of indicators that are used to measure the system's performance. These indicators are used to calculate the TVET system's performance index, which is a composite index that reflects the system's overall performance.

### 4.j. Quality assurance

The quality assurance of the TVET system is based on the use of a set of mechanisms that are used to ensure the quality of the system's outputs. These mechanisms are used to ensure that the system's outputs are of high quality and that they meet the needs of the stakeholders. The quality assurance is also based on the use of a set of indicators that are used to measure the system's performance. These indicators are used to calculate the TVET system's performance index, which is a composite index that reflects the system's overall performance.

### 4.k. Quality assessment

The quality assessment of the TVET system is based on the use of a set of methods that are used to assess the system's performance. These methods are used to assess the system's performance in terms of its inputs, its processes, and its outputs. The quality assessment is also based on the use of a set of indicators that are used to measure the system's performance. These indicators are used to calculate the TVET system's performance index, which is a composite index that reflects the system's overall performance.
