#### ***4.a. Rationale***

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey is used to monitor and evaluate the progress of development programs and to inform policy decisions. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time. The survey is a valuable tool for understanding the needs and priorities of the population and for improving the quality of life.

#### 4.c. Method of computation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey is used to monitor and evaluate the progress of development programs and to inform policy decisions. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time. The survey is a valuable tool for understanding the needs and priorities of the population and for improving the quality of life.

#### 4.d. Validation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey is used to monitor and evaluate the progress of development programs and to inform policy decisions. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time. The survey is a valuable tool for understanding the needs and priorities of the population and for improving the quality of life.

### 5. Data availability and disaggregation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey is used to monitor and evaluate the progress of development programs and to inform policy decisions. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time. The survey is a valuable tool for understanding the needs and priorities of the population and for improving the quality of life.

### 6. Comparability/deviation from international standards

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey is used to monitor and evaluate the progress of development programs and to inform policy decisions. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time. The survey is a valuable tool for understanding the needs and priorities of the population and for improving the quality of life.

### 7. References and Documentation

[1] Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey is used to monitor and evaluate the progress of development programs and to inform policy decisions. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time. The survey is a valuable tool for understanding the needs and priorities of the population and for improving the quality of life.
