## 4.a. Rationale

The rationale for the study is to provide a comprehensive overview of the current state of the country's health and development. The study is based on the assumption that the data collected from the CDHS 2016 survey is representative of the population. The study aims to identify the key challenges and opportunities for the country's health and development. The study is organized into four main sections: 1. Introduction, 2. Data availability and disaggregation, 3. Method of computation, and 4. Comment and limitations. The study is based on the assumption that the data collected from the CDHS 2016 survey is representative of the population. The study aims to identify the key challenges and opportunities for the country's health and development. The study is organized into four main sections: 1. Introduction, 2. Data availability and disaggregation, 3. Method of computation, and 4. Comment and limitations.

## 4.b. Comment and limitations

The comment and limitations section discusses the strengths and weaknesses of the study. The strengths of the study include the use of a large, representative sample and the use of a standardized survey instrument. The limitations of the study include the potential for non-response bias and the lack of data on certain variables. The study is based on the assumption that the data collected from the CDHS 2016 survey is representative of the population. The study aims to identify the key challenges and opportunities for the country's health and development. The study is organized into four main sections: 1. Introduction, 2. Data availability and disaggregation, 3. Method of computation, and 4. Comment and limitations.

## 4.c. Method of computation

The method of computation section describes the statistical methods used in the study. The study uses a variety of statistical methods, including descriptive statistics, inferential statistics, and regression analysis. The study is based on the assumption that the data collected from the CDHS 2016 survey is representative of the population. The study aims to identify the key challenges and opportunities for the country's health and development. The study is organized into four main sections: 1. Introduction, 2. Data availability and disaggregation, 3. Method of computation, and 4. Comment and limitations.

## 5. Data availability and disaggregation

The data availability and disaggregation section discusses the availability of the data and the disaggregation of the data by gender, age, and region. The data is available in both English and Swahili. The data is disaggregated by gender, age, and region. The study is based on the assumption that the data collected from the CDHS 2016 survey is representative of the population. The study aims to identify the key challenges and opportunities for the country's health and development. The study is organized into four main sections: 1. Introduction, 2. Data availability and disaggregation, 3. Method of computation, and 4. Comment and limitations.
