CDHS (Center for Disease Control and Health Statistics) is a leading organization in the field of public health and disease prevention. It provides a wide range of services, including research, surveillance, and health promotion. The organization is committed to improving the health and well-being of the community through its various programs and initiatives.

[illegible][illegible][illegible]

Demographic and Health Surveys (DHS) are a series of standardized surveys that provide information on a wide range of demographic and health indicators. These surveys are conducted in a standardized manner across different countries and regions, allowing for comparisons and analysis of data across different populations. The surveys typically cover a wide range of topics, including fertility, mortality, and health status. The data collected from these surveys is used to inform policy and program development, as well as to monitor progress towards development goals. The surveys are conducted by the Demographic and Health Surveys Program, which is a part of the United States Agency for International Development (USAID). The program is responsible for the design, implementation, and dissemination of the surveys. The data collected from the surveys is made available to the public through the DHS website, which provides a user-friendly interface for accessing the data. The DHS website also provides a variety of tools and resources for analyzing the data, including data visualization tools and statistical software. The DHS website is a valuable resource for researchers, policymakers, and the general public alike.
