4.b. Comment and limitations

The data sources used in the study are summarized in Table 1. The data sources are categorized into three main groups: (1) National level data, (2) Regional level data, and (3) Individual level data. National level data includes data from the National Bureau of Statistics (NBS), the Ministry of Health, and the Ministry of Education. Regional level data includes data from the Regional Health Offices (RHOs) and the Regional Education Offices (REOs). Individual level data includes data from the National Longitudinal Survey (NLS) and the National Health and Medical Research Council (NH&MRC) survey. The data sources are used to analyze the impact of the COVID-19 pandemic on the health and education of the population.

4.c. Method of computation

The data sources used in the study are summarized in Table 1. The data sources are categorized into three main groups: (1) National level data, (2) Regional level data, and (3) Individual level data. National level data includes data from the National Bureau of Statistics (NBS), the Ministry of Health, and the Ministry of Education. Regional level data includes data from the Regional Health Offices (RHOs) and the Regional Education Offices (REOs). Individual level data includes data from the National Longitudinal Survey (NLS) and the National Health and Medical Research Council (NH&MRC) survey. The data sources are used to analyze the impact of the COVID-19 pandemic on the health and education of the population.

4.d. Validation

The data sources used in the study are summarized in Table 1. The data sources are categorized into three main groups: (1) National level data, (2) Regional level data, and (3) Individual level data. National level data includes data from the National Bureau of Statistics (NBS), the Ministry of Health, and the Ministry of Education. Regional level data includes data from the Regional Health Offices (RHOs) and the Regional Education Offices (REOs). Individual level data includes data from the National Longitudinal Survey (NLS) and the National Health and Medical Research Council (NH&MRC) survey. The data sources are used to analyze the impact of the COVID-19 pandemic on the health and education of the population.

4.i. Quality management

NIS (National Income Survey) is a survey conducted by the National Bureau of Statistics (NBS) to collect data on the income of households. The survey is conducted annually and covers all households in the country. The data collected from the survey is used to calculate the national income and to monitor the growth of the economy. The survey is conducted using a stratified sampling method, where the population is divided into strata based on certain characteristics, and a sample is drawn from each stratum. The data collected from the survey is used to calculate the national income and to monitor the growth of the economy. The survey is conducted using a stratified sampling method, where the population is divided into strata based on certain characteristics, and a sample is drawn from each stratum. The data collected from the survey is used to calculate the national income and to monitor the growth of the economy.

5. Data availability and disaggregation

The data sources used in the study are summarized in Table 1. The data sources are categorized into three main groups: (1) National level data, (2) Regional level data, and (3) Individual level data. National level data includes data from the National Bureau of Statistics (NBS), the Ministry of Health, and the Ministry of Education. Regional level data includes data from the Regional Health Offices (RHOs) and the Regional Education Offices (REOs). Individual level data includes data from the National Longitudinal Survey (NLS) and the National Health and Medical Research Council (NH&MRC) survey. The data sources are used to analyze the impact of the COVID-19 pandemic on the health and education of the population.

6. Comparability/deviation from international standards

The data sources used in the study are summarized in Table 1. The data sources are categorized into three main groups: (1) National level data, (2) Regional level data, and (3) Individual level data. National level data includes data from the National Bureau of Statistics (NBS), the Ministry of Health, and the Ministry of Education. Regional level data includes data from the Regional Health Offices (RHOs) and the Regional Education Offices (REOs). Individual level data includes data from the National Longitudinal Survey (NLS) and the National Health and Medical Research Council (NH&MRC) survey. The data sources are used to analyze the impact of the COVID-19 pandemic on the health and education of the population.
