4.a. Rationale

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on population, fertility, mortality, and health. The data from the survey is used to monitor and evaluate the progress of development and health programs. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time. The survey is a valuable tool for understanding the needs and priorities of the population and for planning and implementing development and health programs.

4.c. Method of computation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on population, fertility, mortality, and health. The data from the survey is used to monitor and evaluate the progress of development and health programs. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time. The survey is a valuable tool for understanding the needs and priorities of the population and for planning and implementing development and health programs.

4.d. Validation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on population, fertility, mortality, and health. The data from the survey is used to monitor and evaluate the progress of development and health programs. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time. The survey is a valuable tool for understanding the needs and priorities of the population and for planning and implementing development and health programs.

5. Data availability and disaggregation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on population, fertility, mortality, and health. The data from the survey is used to monitor and evaluate the progress of development and health programs. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time. The survey is a valuable tool for understanding the needs and priorities of the population and for planning and implementing development and health programs.

6. Comparability/deviation from international standards

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on population, fertility, mortality, and health. The data from the survey is used to monitor and evaluate the progress of development and health programs. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time. The survey is a valuable tool for understanding the needs and priorities of the population and for planning and implementing development and health programs.

7. References and Documentation

[1] Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on population, fertility, mortality, and health. The data from the survey is used to monitor and evaluate the progress of development and health programs. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time. The survey is a valuable tool for understanding the needs and priorities of the population and for planning and implementing development and health programs.
