

0.a. Goal

The goal of the ISCO is to provide a common framework for the classification of occupations across different countries and regions, facilitating the comparison of occupational data and the analysis of labour market trends.

0.b. Target

The target of the ISCO is to provide a common framework for the classification of occupations across different countries and regions, facilitating the comparison of occupational data and the analysis of labour market trends. The target is to provide a common framework for the classification of occupations across different countries and regions, facilitating the comparison of occupational data and the analysis of labour market trends.

0.c. Indicator

0.c.1 The indicator is the number of occupations classified in the ISCO (ISCO)

0.d. Series

0.d.1 The series is the number of occupations classified in the ISCO (ISCO) (ISCO)

0.e. Metadata update

0.e.1 The metadata update is the number of occupations classified in the ISCO (ISCO)

0.f. Related indicators

0.f.1 The related indicators are the number of occupations classified in the ISCO (ISCO); the number of occupations classified in the ISCO (ISCO); the number of occupations classified in the ISCO (ISCO)

1.a. Organisation

1.a.1 The organisation is the International Labour Office (ILO) (ILO) (ILO)

1.b. Contact person(s)

1.b.1 The contact person(s) is the International Labour Office (ILO) (ILO)

1.c. Contact organisation unit

1.c.1 The contact organisation unit is the International Labour Office (ILO), the International Labour Office (ILO), the International Labour Office (ILO)

4.a. Rationale

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and is used to estimate the prevalence of various health conditions and to monitor trends over time. The survey is conducted in a household and is used to estimate the prevalence of various health conditions and to monitor trends over time. The survey is conducted in a household and is used to estimate the prevalence of various health conditions and to monitor trends over time.

4.c. Method of computation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and is used to estimate the prevalence of various health conditions and to monitor trends over time. The survey is conducted in a household and is used to estimate the prevalence of various health conditions and to monitor trends over time.

4.d. Validation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and is used to estimate the prevalence of various health conditions and to monitor trends over time. The survey is conducted in a household and is used to estimate the prevalence of various health conditions and to monitor trends over time.

5. Data availability and disaggregation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and is used to estimate the prevalence of various health conditions and to monitor trends over time. The survey is conducted in a household and is used to estimate the prevalence of various health conditions and to monitor trends over time.

6. Comparability/deviation from international standards

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and is used to estimate the prevalence of various health conditions and to monitor trends over time. The survey is conducted in a household and is used to estimate the prevalence of various health conditions and to monitor trends over time. The survey is conducted in a household and is used to estimate the prevalence of various health conditions and to monitor trends over time.

7. References and Documentation

[1] Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and is used to estimate the prevalence of various health conditions and to monitor trends over time. The survey is conducted in a household and is used to estimate the prevalence of various health conditions and to monitor trends over time.
