#### **4.a. Rationale**

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey are used to estimate national and sub-national rates of various indicators, and to monitor trends over time. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time.

#### 4.c. Method of computation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey are used to estimate national and sub-national rates of various indicators, and to monitor trends over time. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time.

#### 4.d. Validation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey are used to estimate national and sub-national rates of various indicators, and to monitor trends over time. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time.

### 5. Data availability and disaggregation

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey are used to estimate national and sub-national rates of various indicators, and to monitor trends over time. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time.

### 6. Comparability/deviation from international standards

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey are used to estimate national and sub-national rates of various indicators, and to monitor trends over time. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time.

### 7. References and Documentation

[1] Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey are used to estimate national and sub-national rates of various indicators, and to monitor trends over time. The survey is conducted in a standardized manner, allowing for comparison of results across different countries and over time.
