Demographic and Health Surveys (DHS) are a series of population and household surveys that provide information on a wide range of demographic, health, and socioeconomic indicators. These surveys are conducted in a standardized manner across different countries and over time, allowing for comparisons and trends to be identified. The data collected from these surveys is used by researchers, policymakers, and the public to understand population dynamics, health status, and development challenges. The surveys typically cover topics such as fertility, mortality, education, and employment. The data is often presented in a structured format, such as tables or charts, to facilitate analysis and interpretation.
