## 4.a. Rationale

The rationale for this study is to provide a comprehensive overview of the current state of research on the topic. The study is based on a review of the literature, which has identified a number of gaps in the existing knowledge. The study aims to address these gaps by providing a detailed analysis of the data and by discussing the implications of the findings. The study is organized into four main sections: Introduction, Methodology, Results, and Conclusion. The Introduction provides a brief overview of the study and its objectives. The Methodology section describes the data sources and the methods used for data collection and analysis. The Results section presents the findings of the study, and the Conclusion discusses the implications of the findings and provides recommendations for future research.

## 4.b. Comment and limitations

The study has several limitations, which are discussed in this section. First, the study is based on a cross-sectional design, which limits the ability to establish causal relationships. Second, the study is based on self-reported data, which may be subject to bias. Third, the study is limited to the population of the country, which may not be representative of the general population. Despite these limitations, the study provides valuable insights into the topic and contributes to the existing knowledge.

## 4.c. Method of computation

The data were computed using the following methods: First, the data were cleaned and prepared for analysis. Second, the data were analyzed using statistical software. Third, the results were presented in tables and figures. The methods used for data collection and analysis are described in detail in the Methodology section.

## 5. Data availability and disaggregation

The data are available in the CDHS 2016 Data Report (English) and are disaggregated by sex, age, and education level. The data are also available in the CDHS 2016 Data Report (Arabic) and in the CDHS 2016 Data Report (French). The data are available for the following variables: (1) Demographic variables, (2) Socio-economic variables, (3) Health variables, and (4) Education variables.
