Demographic and Health Surveys (DHS) are a series of standardized surveys that provide information on a wide range of demographic and health indicators. These surveys are conducted in a standardized manner across different countries and regions, allowing for comparisons and analysis of data across different populations. The surveys typically cover a wide range of topics, including fertility, mortality, and health status. The data collected from these surveys is used to inform policy and program development, as well as to monitor progress towards development goals.
