

## **0.a. Goal**

0.a. Goal: The goal of the indicator is to measure the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring.

## **0.b. Target**

0.b. Target: The target of the indicator is to measure the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring. The target is to achieve the Sustainable Development Goals (SDGs) by 2030.

## **0.c. Indicator**

0.c. Indicator: The indicator is a measure of the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring.

## **0.d. Series**

0.d. Series: The series is a measure of the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring.

## **0.e. Metadata update**

0.e. Metadata update: The metadata update is a measure of the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring.

## **0.f. Related indicators**

0.f. Related indicators: The related indicators are a measure of the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring.

## **1.a. Organisation**

1.a. Organisation: The organisation is a measure of the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring.

## **1.b. Contact person(s)**

1.b. Contact person(s): The contact person(s) is a measure of the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring.

## **1.c. Contact organisation unit**

1.c. Contact organisation unit: The contact organisation unit is a measure of the progress of the Sustainable Development Goals (SDGs) and to provide a basis for policy-making and monitoring.

## **1.d. Contact person function**

#### ***4.a. Rationale***

Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and includes information on fertility, mortality, and other health-related issues. The data from the survey is used to monitor and evaluate the progress of development programs and to inform policy decisions.

#### 4.c. Method of computation

The data for the Demographic and Health Survey (DHS) is collected through a household survey. The survey is conducted in a representative sample of households and includes information on a wide range of demographic and health indicators. The data is then analyzed using statistical methods to produce the results presented in this report.

#### 4.d. Validation

The data for the Demographic and Health Survey (DHS) is validated through a series of steps. First, the data is checked for completeness and accuracy. Then, the data is compared to other sources of information to ensure consistency. Finally, the data is reviewed by a panel of experts to ensure that it is reliable and valid.

### 5. Data availability and disaggregation

The data for the Demographic and Health Survey (DHS) is available in a variety of formats. It can be accessed through the DHS website or through a data request. The data is also available in a disaggregated format, allowing users to view data by country, region, and other demographic factors.

### 6. Comparability/deviation from international standards

The data for the Demographic and Health Survey (DHS) is compared to international standards to ensure that it is reliable and valid. The data is compared to the standards set by the United Nations and the World Health Organization. The results of the comparison are used to identify any deviations from the standards and to ensure that the data is consistent with international standards.
