Demographic and Health Survey (DHS) is a household survey that provides information on a wide range of demographic and health indicators. The survey is conducted in a representative sample of households and covers a wide range of topics, including fertility, mortality, and health status. The data from the survey is used to monitor and evaluate the progress of development programs and to inform policy decisions.

5. Data availability and disaggregation

The data from the DHS is available in a variety of formats, including individual-level data, summary data, and disaggregated data. The individual-level data is available in a database that can be accessed through the DHS website. The summary data is available in a variety of formats, including tables, charts, and maps. The disaggregated data is available in a variety of formats, including tables, charts, and maps.
